

Kevin Fernandes Silva

Fullstack Developer | Aspiring Junior Red Teamer (Offensive Security)

São Paulo, Brazil · [linkedin.com/in/kevin-fernandes-silva](https://www.linkedin.com/in/kevin-fernandes-silva) · Advanced English

PROFESSIONAL SUMMARY

Fullstack Developer actively transitioning into Offensive Security, with a focus on Junior Red Team roles. Professional experience in C#, .NET, Angular, Golang, Python, Docker, REST APIs, and NoSQL databases (MongoDB and Redis), applied to a practical understanding of application architecture, authentication, containerization, and attack surfaces in real corporate environments. Hands-on practice in reconnaissance, enumeration, and web exploitation (Nmap, Burp Suite, Wireshark, OverTheWire, TryHackMe), including vulnerability identification, documentation, and technical communication of findings — skills built both on the job and in labs such as TryHackMe, OverTheWire, and picoCTF.

TECHNICAL STACK

Offensive Security

- Web Pentesting — hands-on practice in labs (OverTheWire Natas, TryHackMe): headers, cookies, client-side bypass, code review
- Reconnaissance, Enumeration and OSINT — Nmap, Google Dorks, Shodan, SEToolkit
- Burp Suite, Wireshark (in progress)
- Linux, SSH, Bash, Python
- TCP/IP, DNS, HTTP/HTTPS, VPN
- OWASP Top 10 and CVEs — applied in web security labs and the Imersão Hacker track
- TryHackMe, OverTheWire, picoCTF, CMD Challenge

Development

- C#, .NET, Golang, Angular, Python
- Docker, REST APIs, API Gateway
- MongoDB, Redis, Git

Automation

- OCR (PaddleOCR), Python automation
- LLMs applied to automation and AI security studies

PROFESSIONAL EXPERIENCE

HS Prevent — Fullstack Developer

2025 – Present

Development and maintenance of web applications in C#, .NET, Angular, Golang, and Python, with hands-on exposure to application architecture, REST APIs, authentication, and service communication — building direct understanding of attack surfaces in real corporate environments. Implementation and maintenance of Docker environments, MongoDB and Redis databases, technical documentation, and collaboration with DevOps.

ACADEMIC BACKGROUND

Universidade Anhanguera

Systems Analysis and Development — 2023-2026

INFORMATION SECURITY — HANDS-ON PRACTICE & CTFs

- **TryHackMe** — ongoing practice in Linux, networking, and web security
- **OverTheWire Bandit** — Linux, Bash, SSH, permissions, grep, find, strings, Base64
- **OverTheWire Natas** — HTTP, Burp Suite, cookies, headers, code review, and OWASP Top 10 fundamentals
- **OverTheWire Krypton** — Caesar cipher, Vigenère, XOR, and cryptanalysis
- **picoCTF** — Python, Netcat, hashes, Git, regex
- **CMD Challenge** — Bash, awk, sed, chmod, processes, and pipes
- **Imersão Hacker** — CVEs and vulnerability analysis, OSINT, Google Dorks, Shodan, malware types, SEToolkit, Wifite, cyber investigation

KEY STRENGTHS

- Analytical and investigative mindset, with a proactive drive for continuous learning in offensive security
- Understanding of attack surfaces gained from hands-on development experience (applications, APIs, authentication, containerization)
- Ongoing, self-driven practice in CTFs and offensive security labs (TryHackMe, OverTheWire, picoCTF, CMD Challenge)
- Experience in technical documentation, relevant to vulnerability reporting and communication
- Advanced English
